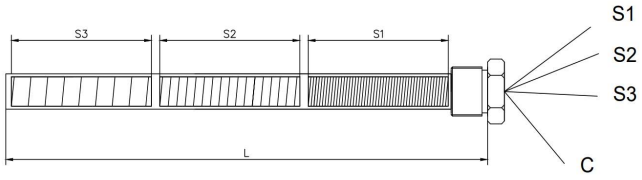
CARTRIDGE HEATER WITH
3 EQUAL DEPENDENT DIFFERENTIATED SECTIONS
AND STRAIGHT THREAD MECHANICAL CONNECTION

XLD3D-T



Cartridge Heater Model XLD3D-T, **with 3 equal, dependent, differentiated sections, equipped with a welded straight-thread connection on the bottom (opposite to the cable side).** The body can be manufactured from various types of steel, depending on the application. Three-phase plus common cables exit from the same side. The cables are available in two different colors to distinguish the phases from the common conductor. Each phase is also numbered to identify the corresponding section. The common cable cross-section is sized according to the total power of the heater. All heaters are equipped with an additional silicone sleeve, approximately 80 mm in length, to protect the cable exit area. Sealing is defined according to the application and the specific characteristics of the heater.
